

Hello 🤝

I'm Ahmed, a frontend web developer who creates modern websites and web applications

About me

I've been working as a frontend engineer for more than **three years** and now I'm searching for a position that would allow me to grow as a professional, use the latest technologies and techniques. Preferably I would love to participate in construction and maintenance of a modern, complex single page application. I write semantic **HTML5** markup, use **CSS3** techniques for implementing complex responsive designs and animations, build pixel-perfect pages and use **JavaScript** with popular libraries to create fast, functional and dynamic applications. I have no working experience with **React**, but I'm currently learning React/Redux stack and willing to gain experience. In my workflow I use **npm** modules, **git** for version control, **pug** as a template engine, **Stylus**, **SASS** or **LESS** as style preprocessors, **BEM** methodology as a naming convention, **React** as the main JS library and **Webpack** for generating the final product.

Working experience

RoyalMark

March 2015 to May 2017

At RoyalMark most of my projects were landing pages. There I usually created responsive pixel perfect web-pages using design mockups, made them interactive and capable of sending and receiving necessary information using APIs of the server.

Netrika

June 2017 to November 2018

At Netrika I was dealing with updating and upgrading existing websites, sometimes making some relatively small projects from scratch. It was hard to grow professionally while working there, which is important for me, so I decided to quit.

Freelancer

November 2018 — now

Education

I graduated from Herzen University in 2017 as a Bachelor of Computer Science
